Industrial Contract-Tickets confer a right to travel solely by the Industrial Train and by no higher class than that for which they are issued. If a holder chooses to travel by another train in a higher class than he contracts for, he must pay the ordinary fare as if his Industrial Ticket had no existence.

The term "Industrial Train" is confined strictly to that ordinary Passenger train which is due first to arrive from the country each week day morning at Port Louis, and to that ordinary Passenger Train which is notified to leave Port Louis last at night.

SECOND AND THIRD CLASS MONTHLY CONTRACT TICKETS.

Available for travelling by ordinary or Industrial Trains between Port Louis and the following Stations.

ESTABLISHMENTS DETAILED.

The heading of Column 8 of this Return has been shortened for convenience of printing. At full length it is given as follows in the form supplied by the Secretary of State:—

“Whether the Office be held by Principal in conjunction with any and what other Civil, Military, or Naval Office, or Appointment or Place of Profit, in any Colony, or on the Establishment of the United Kingdom;

“If the Office be held by a Military or Naval Officer, state whether upon the Active or the Retired List, and give the Total Amount of Pay and Allowance or of Pension of every kind actually received by him in addition to the Profits of his Office.”

The salary in all cases is paid from the General Revenues of the Colony, except as regards the Magistrate for the Oil Islands whose salary and travelling expenses are partly contributed by the Proprietors or Lessees of the said Islands, under Art. 4 of Ord. 41. of 1875.

Agriculture and Manufacture.

The hopes entertained for the sugar crop of the year 1898 were fully realized. Although the rainfall was below the average, and at the opening of the year, fears were entertained that drought might affect the yield in the Northern Districts, copious rains fell in March and an unusually favourable season followed ; the result has been the harvesting of the heaviest crop on record, estimated at not less than 175,000 tons. The extension of squatting, and cultivation of canes by small proprietors has contributed greatly to the increased returns, but the yield all over the Island has been much over the Average. The chief feature, on the Agricultural side is the important part played by seedling canes, and by some varieties of sugar cane recently introduced. Of the latter, the "Big Tana" introduced by the Royal Gardens in 1892 has given exceptional yield, and seems adapted to all parts of the Island ; of the former, many hundred of acres are probably planted and some varieties have proved to be hardy, prolific, and of high sugar contents. The majority perhaps of canes propagated directly from seed, have presented no special feature of excellence, but a certain number are of undoubted value and are destined to exercise a profound influence on the future of cane cultivation in the Colony, by replacing varieties which show signs of deterioration by constant reproduction on lands continuously planted. There has been a marked diminution, almost amounting to the disappearance, of the diseases which did so much harm in 1896 and 1897, and the atmospheric conditions during the manufacturing season have been particularly favourable to the maturing and treatment of the Juice. Great apprehension was felt during the early part of the season, as to the disposal of the large output of sugar. The bounty system had permitted Beetroot sugar to invade our markets in India and elsewhere to such an extent, that it practically ruled the price, and actually brought the value of our produce down to the level of the World's market. No longer favoured by the high rate of exchange, which formerly enabled Mauritius sugar to retain the command of India, it seemed to our planters that we might not only be compelled to submit to a ruinously low range of prices, but might even experience difficulty in finding an outlet for the largest crop on record. The drop in prices however, had the effect of turning the attention of Planters to the manufacture of a lower class of sugar, to compete with Java and such like qualities on the markets of the world. The American Anti-bounty tariff created a demand for a low quality of granulated sugar, which could enter under their customs regulations, for refining purposes, and towards the close of the crop season, abandoning the more costly processes of the manufacture of white crystals for Bombay, many planters worked for the new demand, and over 20,000 tons were shipped to the States. This helped the market somewhat, but the average price realized for the whole produce of the Island will probably be the lowest on record.

Very large quantities of Maize, Manioc and ground provisions have been raised during the year. The supply of Peef, and working Cattle has been somewhat restricted, owing to falling off in exports from Madagascar. The cultivation of tea has not experienced any considerable extension.

The year has been marked by renewed agitation against the Bounty System ; petitions from the Chamber of Agriculture to the Imperial Government, and to the Indian Government for the imposition of a countervailing duty in India have been forwarded through the Secretary of State for the Colonies and further action, in conjunction with the Chambers of Commerce in India, met with so far a favourable reception, as to warrant the hope that some relief might be expected in that direction—a hope which has since been partially realized.

No new Machinery of any importance, nor any notable improvement in Machineries have to be recorded, but this must be attributed to the want of available Capital and the absence of Credit, in consequence of the Bounty system, rather than to want of energy, and intelligence on the part of the planters.

* By " Penal imprisonment " is meant imprisonment (Col. 5) inflicted as a substantive punishment in pursuance of a sentence of a Court of Justice as distinguished from imprisonment for safe custody, &c.

QUESTION I.

If the Prison is on the separate system, is the separation complete? And, if not, what is the separation enforced by day and night respectively?

Mauritius.—(Prisons proper).—In many cells prisoners at night are located in association. In Block B. of the New Central Prisons, Felons and Long sentenced men are located in separation.

Do. —Government Reformatory and Industrial School.—In association, day and night.

Rodrigues.—No.

Seychelles.—No, the only separation enforced by day and night is the separation of the sexes which is complete, and the juveniles from adults.

QUESTION II.

If not on the separate system, what provision is there for the supervision of the prisoners while in association?

Mauritius.—(Prisons proper).—All cells and wards remain empty during the day. The prisoners whether at work during the day or sleeping at night are supervised by Prison Officers and Guards.

Do. —Government Reformatory and Industrial School.—Supervised by Guards.

Rodrigues.—None.

Seychelles.—The association wards are visited frequently during the night by the Guards on night duty.

QUESTION III.

How many cells are there; and how many associated wards?

Mauritius.—(Prisons proper).—In Port-Louis there are 6 wards divided into 167 cells.

In the New Central Prisons there are 792 cells in all, of which 432 are single cells.

Do. —Government Reformatory and Industrial School.—Two dormitories and two punishment cells.

Rodrigues.—Two cells, four metres and 15 centimetres each.—No associated wards.

EE

RESULTS
OF
METEOROLOGICAL OBSERVATIONS
TAKEN DURING THE YEAR
1898
AT THE
ROYAL ALFRED OBSERVATORY,
MAURITIUS.

INTRODUCTION.

The Observatory is about 3 miles from the west coast and stands on a plain which is 179 feet above the sea-level. From W.S.W., through West to North, there is an uninterrupted view of the sea, and from North, through East to S. E., the ground generally slopes from the Piton, the summit of which bears about four miles E. b. S. and is 917 feet above the sea-level. Between S. E. and S. W., there is a chain of mountains, the highest peak of which, the Peterboth, bears nearly six miles due south, and has an altitude of 2685 feet above the sea. The nearest extremities of two spurs which run N. and N. W. from the Peterboth, are at distances of three to four miles, and have an elevation of about 560 feet.

The Island is of volcanic origin, and the rocks are more or less magnetic. Around the Observatory the soil has a depth of 3 to 14 feet, below which is solid basalt.

The Standard Barometer (Newman, No. 128) has no error, and the cistern is 180.86 feet above the sea-level. No correction has been applied for the influence of gravity on the barometrical readings. For a pressure of 30.000 inches, the correction for the latitude of the Observatory is -0.060 inch. The values given are corrected for temperature and capillarity, and reduced to sea-level.

For the pressure of the atmosphere the mean of the 9^h. and 15^h. observations gives approximately the mean for the day.

The thermometers are placed in a lofty room within a few feet of two large open windows, one facing the East and the other the South, so that the bulbs which are from 5 to 6 feet above the ground, are generally in a current of air. The mean of the 6^h. and 15^h. observations gives approximately the mean temperature for the day.

All the thermometers have been verified at the Kew Observatory. They have been frequently compared with the Observatory Standards, and when necessary, corrections have been applied for their respective errors.

The minimum thermometers have been read daily at 9, and the maximum at 15 hours.

The values of the Vapour-Tension and Relative Humidity have been computed from Glaisher's Hygrometrical Tables, eighth edition.

The Direction and Velocity of the Wind are recorded by a self-registering Kew anemometer by Casella, the cups of which are 51.2 feet above the surface of the ground.

For the Force of the Wind the following scale has been used.

Miles per hour.	Force.	Miles per hour.	Force.
From 0 to 3...	= 0	From 35 to 40...	= 7
" 4 " 8...	= 1	" 41 " 48...	= 8
" 9 " 13...	= 2	" 49 " 56 ..	= 9
" 14 " 18...	= 3	" 57 " 65...	= 10
" 19 " 23...	= 4	" 66 " 75...	= 11
" 24 " 28...	= 5	" 76 " 90...	= 12
" 29 " 34...	= 6		

A clear day is considered to be one on which the mean amount of cloud is below 7.

The rim of Glaisher's raingauge is 8 inches in diameter, and 10 inches above the surface of the ground. The rainfall is measured at 9^h. , and the amount is set down to the day on which it is measured.

In the column headed "Remarks" the abbreviations are those adopted by the Meteorological Office, London.

The hours refer to Mauritius Civil Time.

RESULTS OF OBSERVATIONS TAKEN IN 1898.

The mean temperature in the shade, between two open windows in a lofty room, was $73^{\circ}.5$, being equal to the average for the last 24 years; absolute maximum temperature $86^{\circ}.8$ on February 9; absolute minimum $56^{\circ}.7$ on July 2.

Mean temperature in a screen on lawn $74^{\circ}.7$, against an average of $74^{\circ}.6$ for the last 14 years, absolute maximum temperature $92^{\circ}.1$ on February 9; absolute minimum $52^{\circ}.3$ on June 2.

Highest temperature in the sun's rays $165^{\circ}.5$ on February 15; mean for the year $140^{\circ}.0$.

Highest temperature of the soil at a depth of 5 feet, $82^{\circ}.1$ on March 17; lowest $74^{\circ}.8$ on August 24 and 25. Highest at a depth of 10 feet, $80^{\circ}.0$ on May 13; lowest $76^{\circ}.0$ on November 18 to 20.

Actinometric observations were taken on those days on which the sky was free from cloud in the neighbourhood of the Sun at, or near, apparent noon. The greatest mean effect for an exposure of 2 minutes was $10^{\circ}.42$ on November 5, the Sun's mean altitude being $85^{\circ}-20'$; least $8^{\circ}.77$ on May 18 & 28, the Sun's mean altitude being $50^{\circ}-11'$ and $48^{\circ}-19'$ respectively.

Total duration of bright sunshine 2831.7 hours, and mean proportion for year (constant sunshine being 1) 0.631.

Mean atmospheric pressure at sea-level (derived from hourly measurements of the barograms) 30.052 inches, against an average of 30.076 for the last 24 years; greatest pressure 30.848 on July 5; least pressure 29.559 on February 7.

Mean dew point $65^{\circ}.2$, against an average of $64^{\circ}.7$; highest $76^{\circ}.6$ on March 25; lowest $49^{\circ}.2$ on July 23.

Mean vapour-tension .632 inch, against an average of .620; highest .916 on March 25; lowest .350 on July 23.

Mean relative humidity 76.3 per cent, against an average of 74.7; highest 96.4 on May 12; lowest 43.7 on November 5.

The rainfall was 47.76 inches or 0.82 inch below the average for the last 24 years, the greatest on record is 71.36 inches in 1877 and the least 27.26 in 1897.

The greatest monthly rainfalls were 8.32 inches in May, 6.61 in August, 6.53 in March and 6.48 in January. The only months in which the rainfall was in excess of the average were May and August with excesses of 3.88 inches and 4.19 inches respectively. In the month of February the rainfall was only 3.70 inches or 3.14 inches below the average.

The greatest fall in one day was 3.76 inches on August 23. The number of days on which rain fell was 187 against an average of 201 for the last 24 years.

Lightning or thunder occurred on 51 days against an average of 33 for the last 24 years.

The mean hourly velocity of the wind, was 11.0 miles, or 0.2 mile below the average for the last 28 years. Greatest velocity for one hour 30.8 on June 7. Mean direction $S74^{\circ}-50'E$ against an average of $S74^{\circ}-03'E$, for the last 22 years.

As far as is yet known there were only two tropical Cyclones in the South Indian Ocean in the course of the year. Their tracks have been determined as accurately as possible.

Storm warnings and weather telegrams were issued on Feb. 5, 6, 7, 8. December 19 & 20.

14 Weather Charts of the South Indian Ocean have been prepared.

As usual, observations made on board of vessels in the Indian Ocean were tabulated and detailed accounts of gales and hurricanes recorded.

The Magnetographs were at work throughout the year, and absolute values of the magnetic elements determined four times a month. The mean Declination was $9^{\circ}.39'.04$ West: mean Dip $54^{\circ}.22'.44$ South; mean Horizontal Force 5.1784; mean Vertical Force 7.2267, and mean Total Force 8.8907 (foot-grain-second, units).

There were 40 magnetic disturbances during the year but with the exception of Feb. 11-13, March 15-16 and September 9-11, none of them were very remarkable. The largest occurred on September 9-11.

The total movements during these 3 principal disturbances were as follows:—

1898.	H. F. (m. m. s. units.)	V. F. (m. m. s. units.)	Declination. (minutes of arc.)
February... 11 —13	0.01483	Small.	13.6
March ... 15 —16	0.02340	Small.	14.7
September 9 —11	0.02820	0.00538	14.9

A Milne's Seismograph, No. 17, for recording unfelt earth tremors was received on September 9. It was set up on September 12-13, and has been at work with little or no interruption since that date.

From the records obtained, it appears that at Mauritius there is a large diurnal variation of level, the mean amplitude from September to December being 7 seconds of arc.

A slight Earthquake shock was recorded on September 21.

586 Photographs of the Sun were taken. The sun was observed on 348 days, on 57 of which no spots were seen.

Observations for time were taken daily, when the weather permitted, and the time ball on the Signal Mountain dropped three times a week.
